

Spring Professional Exam Tutorial v5.0

Question 14

Question 14 - When do you need `@ResponseStatus`?

`@ResponseStatus` annotation is required whenever you want to override default HTTP status returned from controller handler method.

This can be achieved by applying `@ResponseStatus` annotation to:

- ▶ Controller class
- ▶ Controller method
- ▶ Exception being thrown from controller

`@ResponseStatus` annotation allows you to set:

- ▶ HTTP Status Code
- ▶ Reason message to be used in response in case of error
