

Spring Professional Exam Tutorial v5.0

Question 26

Question 26 - Can you use @Component together with @Profile?

Yes, @Profile annotation can be used together with @Component on top of class representing spring bean.

If, class annotated with @Component does not have @Profile, that means that this bean will exist in all profiles.

You can specify one, multiple profiles, or profile in which bean should not exist:

```
@Profile("database")
@Component
@Profile("!prod")
@Profile({"database", "file"})
```
