

# Spring Professional Exam Tutorial v5.0

## Question 09

## Question 09 - How do you define profile specific property files?

Spring Boot allows you to define profile specific property files in two ways:

- ▶ **Dedicated property file per profile:**

- ▶ `application-{profile}.properties`
- ▶ `application-{profile}.yaml`
  - ▶ You can also use `application-default.properties` or `application-default.yaml` filename to specify property file that should be used when no profile is set

- ▶ **Multi-profile YAML Document**

```
server:
  url: https://local.service.com/
---
spring:
  profiles: dev
server:
  url: https://dev.service.com/
---
spring:
  profiles: prod
server:
  url: https://prod.service.com/
```
