Question 18 - What Spring Boot starter would you use for a Spring REST application?

To create Spring REST application, use `Spring Boot Web Starter`.

```xml
<dependency>
    <groupId>org.springframework.boot</groupId>
    <artifactId>spring-boot-starter-web</artifactId>
</dependency>
```

Spring Boot Web Starter Maven pom.xml has following description:

`Starter for building web, including RESTful, applications using Spring MVC. Uses Tomcat as the default embedded container.`

Spring Boot Web Starter will automatically include:

- spring-web
- spring-webmvc
- spring-boot-starter-json
    - jackson-databind
    - …
- spring-boot-starter-tomcat
    - tomcat-embed-core
    - …
- …
