Spring Professional Exam Tutorial v5.0

Question 18

Question 18 - What is the default rollback policy? How can you override it?

Default rollback policy in Spring Framework is set to automatic rollback, but only when unchecked exception is being thrown from the method annotated with `@Transactional` annotation. When checked exception is being thrown from the method, transaction is not being rolled back.

You can override this policy by setting `rollbackFor` / `rollbackForClassName` or `noRollbackFor` / `noRollbackForClassName` field in `@Transactional` annotation.
