Spring Professional Exam Tutorial v5.0

Question 18

Question 18 - How does the @Qualifier annotation complement the use of @Autowired?

`@Qualifier` annotation gives you additional control on which bean will be injected, when multiple beans of the same type are found. By adding additional information on which bean you want to inject, `@Qualifier` resolves issues with `NoUniqueBeanDefinitionException`.

You can use `@Qualifier` in three ways:
- At injection point with bean name as value
- At injection and bean definition point
- Custom Qualifier Annotation Fefinition
